Driptray for Dyson Airblade Hand Dryer

SCHÖNMANN AG produces driptrays
for the Dyson Airblade hand dryer
so that the water removed from the hands
during drying does not fall on the floor.

Wall and Floor Below the Airblade Remain Dry!

Schönmann AG has developed a drip tray for the Dyson Airblade hand dryer.

In washrooms, where many hands are washed, the floor becomes wet as the Dyson Airblade does not catch the water removed from the hands, but lets it fall on the floor on the assumption that the floor is cleaned several times a day.

The SCHÖNMANN drip tray protects the wall and the floor under the Dyson Airblade hand dryer from water and dirt. It is easily removed, emptied and cleaned.

The wall protection plate and the wall bracket are made from electro-polished chrome/nickel steel 1.4301.

The drip tray is made from ABS and available in silver-grey or RAL 9016 traffic white.

The drip tray comes with a lockable security fitting for protection against theft.

The drip trays may be ordered from the following address:

CLEANTEC KG
